Thank you.

INTERSTATE TECHNOLOGY & REGULATORY COUNCIL

A Regulatory Overview of Plasma Technology Report of the Plasma Technology Subgroup Interstate Technology and Regulatory Cooperation Work Group

June, 1996

Acknowledgments

This report represents a collaborative effort on the part of state regulators, industry, public representatives, federal agencies, and other professional organization representatives. The time, effort, help, and advice they freely gave made this document possible.

Recognition of their efforts and thanks go to those representatives from state government who formulated the core of this task group and contributed regulatory, technical and policy considerations during the construction of this document. They are Robert (Stu) Dinwiddie, DOI Grant Manager for the New Mexico Environment Department; Terry Escarda, California Department of Toxic Substances Control; Gary Baughman and Dave Waltz, Colorado Department of Public Health and Environment; Nancy Uziemblo, Dib Goswami and Lynn Coleman, Washington Department of Ecology; Paul Richard, Massachusetts Executive Office of Environmental Affairs; Bill Shafford and Nancy Worst, Texas Natural Resource Conservation Commission; Doug Brown, Virginia Department of Environmental Quality; Randy Steger, Idaho Division of Environmental Quality; and Nick Kolak, New York State Department of Environmental Conservation.

Industry representation in this effort was outstanding and gave a critical perspective of this developing technology. These individuals and their companies include: Rob Haun, Retech, Inc.; Marlin Springer, Plasma Energy Applied Technology; John Tierney and Lawrence Farrar, Montec; Calvin Wolf, Aerotherm Corp.; Gary Anderson and Dave Eaton, Lockheed Martin Idaho Technologies; Ray Geimer, Gary Leatherman and Terry Gillins, Science Application International Co. (SAIC); Steve Peterson, Geo-Center, Inc.; Ken Doak, Thermal Vacuum; and Kenneth Wittle, Electro-Pyrolysis, Inc.

Those who volunteered their time to participate in meetings and offer their perspective were representing themselves as citizens and in some cases communities faced with environmental management problems. Ross Vincent of the Sierra Club and Anne Callison from the Lowry AFB RAB offered important community and conservation values to the Plasma Technology Subgroup during our discussion periods at the larger Interstate Technology and Regulatory Cooperation Work Group (ITRC) meetings. Jerry Todd representing the Nez Pierce Tribe, also contributed valuable insights to the values of Indian nations during waste treatment operations. Their thoughts about plasma as a waste treatment technology and thermal treatment technologies in general were valuable additions to our discussions.

As part of the larger ITRC group, the travel expenses and support staff for the Plasma Technology Subgroup was provided by the U.S Department of Energy, Office of Technology
